

2Way SMS

You can use 2waysms service by follow the next steps

1- Add new Inbound Account

2- Enter your configuration of inbound API which is (username, password and the custom receiver

page that will receive the data in parallel with SMSBulko Portal)

Example for receiver page of 3rd Party APP

```
<?
$sender=$_POST['Sender'];
$country=$_POST['From_Country'];
$message=$_POST['Message'];
$date=$_POST['Message_Receive_Date'];

$host="localhost";

$database_name="testdb";

$user="testdb_user";

$pass="testpass";

mysql_connect($host,$user,$pass);

mysql_select_db($database_name)or die(mysql_error());

mysql_query("SET NAMES 'utf8'");

mysql_query('SET CHARACTER SET utf8',$database_name);

//Insert data to your database

$sqlquery=" INSERT INTO `
requests`(`Request_Date`,`Request_Data`,`Request_Country`,`Request_Number`)

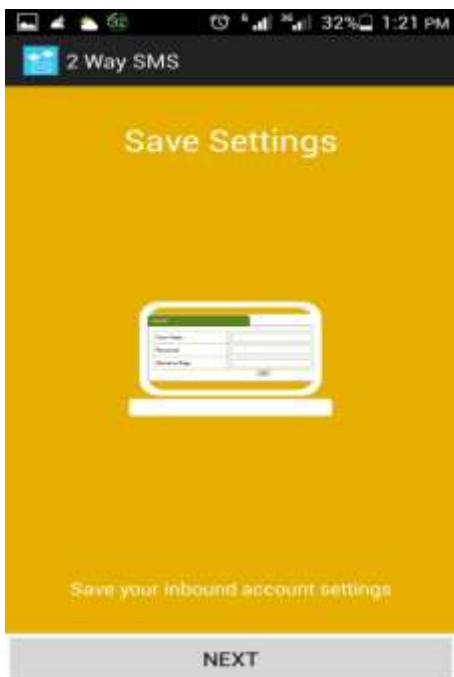

VALUES ('$date','$message','$country','$sender')";

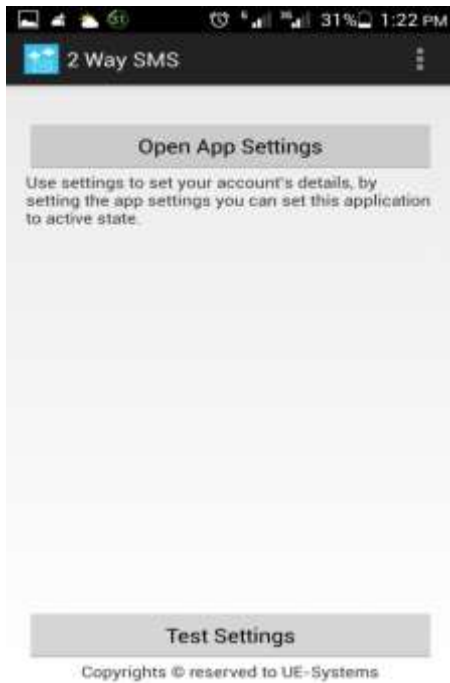

$r= mysql_query($sqlquery);
?>
```

3- Download 2waysms Android Application From Google play store then install it.

Here is the steps after installing the application:

4- Input inbound API Details (API Code, username, password) into installed Application

5- Now any message will be pushed over inbound API will be receive by smsbulko web portal in inbox section, and also will be receive by 3rd party APP. receiver that placed in your configuration

6- Open Outbound API connection and then use it in sending any reply you need

To know how to use Outbound API ... Please, rea

Overview

SMSBulko API allows you to send English and Arabic short messages to single mobile number or for your convenience to multiple mobile numbers at once.
